Platforms AutoCAD was initially released for the Apple Macintosh only. It was later ported to Microsoft Windows. Later, AutoCAD was also released for Unix (with GPL licenses) and Apple computers. AutoCAD LISP AutoCAD introduced its own programming language, AutoLISP, and its first release was AutoCAD 200. AutoLISP was designed for AutoCAD users, and allowed users to write AutoLISP macros for use in AutoCAD. AutoLISP was discontinued in 2003. ObjectARX The ObjectARX API, available since AutoCAD LT 2007, has been adopted by AutoCAD on Windows platform in the same way as the AutoLISP API. ObjectARX is a C++ class library, and the only programming languages supported are C++ and Delphi. Visual LISP Visual LISP (VLISP) is an interpreted language implemented in the Visual Studio environment. It allows users to interact with AutoCAD's internal components. Visual LISP was discontinued in 2007. NetApp NetApp provided an enhanced VB Script language for scripting the Exchange repository. This provides the ability to automate Exchange functions, including the ability to create, copy, move, and delete E-mail messages, but is now obsolete.
