keymacro allows you to define a simple macro which you can then use throughout your script. Each Macro consists of two keywords: Keyword1 and Keyword2. e.g. MyMacro = Keyword1 and Keyword2. Macro are case sensitive. If the Macro consists of only one keyword and is not enclosed in parenthesis, the keyword will automatically be substituted for the contents of the argument given. It is also possible to have an argument which is not enclosed in parenthesis, in this case the keyword will not be substituted. The following is an example of a Macro that works as a simple "Hello World". Example declare @MyMacro as char(5) select @MyMacro = @MyMacro + 'World' select @MyMacro end Download the latest version of SQLXTreme today Latest version: 2.0 History Version 2.0 Bugs Fixed: Previously, while debugging, I was unable to see all actions taking place in the Query Builder. This is now a small issue. Version 1.0 Introduced: A new syntax has been introduced to allow for the use of string literals. The plus sign is now replaced by an equal sign. Also introduced was the ability to pass in values for command parameters. The plus and minus symbols can now be used to replace your text within a line. Bugs Fixed: Now, when the Previewer window is initially opened, the top title area is disabled. This is to prevent any mistakes from being made within the Query Builder. Release Notes Version 2.0 "Hello World" Macro Fix: Now, when the Previewer window is initially opened, the top title area is disabled. This is to prevent any mistakes from being made within the Query Builder. Version 1.0 New Feature: The plus and minus symbols can now be used to replace your text within a line. If you have the old version, be sure to uninstall it before installing the new version. Description of the Background Art In an image forming apparatus such as an electrophotographic copier or a printer, a toner image obtained by developing an electrostatic image formed on an image carrier such as a photoconductor is primarily transferred to a transfer material such as a sheet of paper, a film or a plastic sheet, and then the image is fixed on the transfer material by a fixing device. As a heat fixing device, there is a heat fixing device using a halogen heater as a heat source for heating and melting toner to fix the toner on a transfer material. In the conventional heat fixing device, a halogen heater and a heat source are used together and heating control is carried out by the heat source and the halogen heater by a temperature control method using a thermistor, and a PTC element or the like. As a conventional example, a heat fixing device will be explained with reference to FIGS. 10 and 11. A heat fixing device 500 has a halogen heater 501, a heat source (a halogen heater) 502, a temperature control circuit 503, and a temperature sensor 504. A halogen heater 501 is disposed at a side surface of a film 511 that holds a heat roller 510 at a central portion and a press roller 512 at a tip of the film 511. The halogen heater 501 is
